# ALI AKARMA

Trustworthy AI & Agentic Systems Researcher

Madinah, Saudi Arabia | 443059463@stu.iu.edu.sa

www.aliakarma.codes | GitHub | Google Scholar | LinkedIn

## RESEARCH PROFILE

Undergraduate researcher specializing in trustworthy agentic AI, safe reinforcement learning, adversarial robustness, and AI assurance for autonomous systems. Research experience spans LLM-agent security, multi-agent decision-making, human oversight, verification and validation, and safety evaluation of autonomous AI.

## RESEARCH INTERESTS

Trustworthy and safe agentic AI; AI safety and alignment; adversarial robustness and security of autonomous LLM systems; safety-constrained multi-agent reinforcement learning; AI verification, assurance, and human oversight; trustworthy multimodal AI.

## EDUCATION

**B.S. Information Technology** — Islamic University of Madinah, Saudi Arabia *2023 – May 2027*

- GPA: 4.31 / 5.00 — *Merit-based fully funded scholarship (competitive international selection)*
- Relevant coursework: Machine Learning, Algorithms & Data Structures, Probability & Statistics, Database Systems, Software Engineering
- Thesis interest: Trustworthy and verifiable autonomous AI systems under adversarial conditions

## RESEARCH EXPERIENCE

**Research Intern** — AI V&V Lab, KFUPM *Jun 2026 -- Present*

- Developed and evaluated HiVA, a value-aware hierarchical multi-agent RL system for wildfire suppression, using Cell2Fire and testing robustness across 16 distribution-shift stress conditions, including cross-region California↔Saudi transfer, rotated wind, ignitions, and asset layouts.
- Contributed to an agentic extension of vnvspec, a machine-readable V&V framework, by developing governance controls for prompt security, tool authorization, memory leakage, human oversight, and multi-agent coordination, with typed schemas and automated validation.

**Undergraduate AI Researcher** — Islamic University of Madinah *Jan 2025 -- Present*

- Designed safety-constrained multi-agent reinforcement learning architectures using C-Dec-POMDP and Lagrangian CTDE, achieving 81.5 reward with a 2.3% safety-violation rate across six baselines.
- Analyzed adversarial prompt-injection and jailbreak failure modes in autonomous LLM-agent pipelines; developed LangChain defense middleware with three detection modes and four policy strategies.
- Developed a governance-constrained agentic AI framework incorporating human oversight for safety-critical autonomous decision-making; first author, ICETAS 2026.
- Built 20+ reproducible open-source research systems spanning agentic AI, safety-critical decision-making, AI security, healthcare, and smart infrastructure, with automated testing and archived research artifacts.

## RESEARCH PROJECTS & FUNDING

**King Salman Center for Disability Research (KSCDR)** — *Research Group No. KSRG-2026-321*

- Siddiqui, M. S., Syed, T. A., & **Akarma, A.** (2026). "ADAPT: An Agentic AI Framework for People with Disabilities and Neurodivergence". ***Journal of Disability Research***, *5*(2), e20260830.

  DOI: 10.57197/JDR-2026-0830 | GitHub: github.com/aliakarma/ADAPT
- Syed, T. A., Siddiqui, M. S., **Akarma, A.**, & Formisano, A. (2026). "FedAgent-Chain: A Secure Federated and Agentic AI Framework for Multilingual Disability-Inclusive Employment in AI Cities". ***Smart Cities***, *9*(7), 106.

  DOI: 10.3390/smartcities9070106 | GitHub: github.com/aliakarma/fedagent-chain

## SELECTED PUBLICATIONS

***Google Scholar:*** *154 citations | h-index: 9 | i10-index: 8 (October 2026).*

***First-Author Papers***

## OPEN-SOURCE RESEARCH SOFTWARE

*Selected research systems include reproducible experimental pipelines, automated testing, and archived research artifacts.*

- **Trustguard** — Constrained multi-agent reinforcement learning framework for trustworthy runtime permission governance using MAPPO and Lagrangian safety constraints. (Repository)
- **Secure Agent Runtime** — Multimodal security framework for autonomous LLM agents, covering prompt injection, provenance, and text, image, audio, and video threats. (Repository)
- **SAS-Shield** — Safety-assurance framework for agentic AI combining conformal testing, formal verification, control-barrier constraints, adversarial evaluation, and cryptographic auditability. (Repository)

Additional research software and reproducibility artifacts: github.com/aliakarma

## TECHNICAL SKILLS

**AI/ML:** PyTorch, Hugging Face Transformers, scikit-learn, NumPy
**Agentic AI & LLMs:** LLM orchestration, autonomous agents, prompt-injection defense, adversarial robustness
**Reinforcement Learning:** MAPPO, CTDE, C-Dec-POMDP, Lagrangian constrained optimization
**Trustworthy AI:** safety evaluation, failure-mode analysis, human oversight, policy-aligned control, auditability
**Research Engineering:** Python, Git, Linux, Jupyter, pytest, LaTeX, Zenodo

## AWARDS & CERTIFICATIONS

- **Merit-Based Fully Funded Scholarship** — Islamic University of Madinah (competitive international selection, 2023)
- **Certificate of Research Excellence** — ICETAS 2026, for research contribution on Agentic AI governance
- **Certificate of Appreciation** — ICBDT 2025, for presented research contributions

## LANGUAGES

**Languages:** Urdu (native), English (professional proficiency), Arabic (professional proficiency)
